AccuKnox AI/ML Trainee Assignment

Assignment 1 — Question 4 and Question 5

Candidate Name: Rikk Bera

Question 4: Link to the Most Complex Python Code I Have Written

Project Name: Plant Disease Detection and Weather Analysis

GitHub Repository:
https://github.com/Rikk-Bera/Plant-Disease-Detection-and-weather-analysis

Project Description:

This project focuses on plant disease detection using deep learning and provides weather-related information to support plant health analysis. It combines machine learning techniques with a weather information feature to help users identify potential plant diseases and access relevant weather data.

Technologies Used: Python, PyTorch, Flask, React, and Weather API integration.

Question 5: Link to the Most Complex Database Code I Have Written

Project Name: Store Inventory Management System

Technologies Used: Python, SQLite, SQL, Tkinter

GitHub Repository:
https://github.com/Rikk-Bera/inventory-management-system

Project Description:

This project is a desktop-based inventory management application developed using Python, Tkinter, and SQLite. It manages inventory records and transaction history in a database. The application includes functionality for managing inventory, recording transactions, handling custom fields, deleting records, and exporting data to Excel.

The project demonstrates my practical experience in database design, SQL operations, data management, and integrating a database with a Python application.
